

Christina Lake Cannabis Increases Average THC Concentration of Distillate Oils to 90.4%

VANCOUVER, British Columbia, JUNE 29, 2021 Christina Lake Cannabis Corp. (the “Company” or “CLC” or “Christina Lake Cannabis”) (CSE: CLC) (OTCQB: CLCFF) (FRANKFURT: CLB) is pleased to announce that it has succeeded in its efforts to consistently produce cannabis distillate oils with a tetrahydrocannabinol (“THC”) concentration of 90% or higher, a benchmark that is considered to be highly prestigious in the vaping industry. Based on 2020 data from Health Canada, approximately 37% of Canadian cannabis consumers were users of vape pens, e-cigarettes, and vapourizers¹. With the introduction of “Cannabis 2.0” in early 2020 (allowing the production of beverages, edibles, and other everyday products with cannabis), several new categories of cannabis products had emerged from which there was new demand for extracts such as distillate oils. A certificate of analysis dated June 17, 2021 has confirmed that CLC’s distillate oils consistently contain a THC concentration of 90.4%, which is a very critical component for licensed producers who seek to make products containing THC.

CLC’s sales force is led by Milan Stefancik, who gained considerable familiarity with the cannabis industry during his tenure at Aurora Cannabis (one of the world’s largest cannabis firms), working with national key accounts across Canada. At the beginning of May 2021, CLC completed its first sale of distillate oil to an established player in the vaping industry, who has reported positive feedback to include end-user customer satisfaction with the final formulation using distillate oil from CLC, which has been sold in multiple Canadian provinces. Through its continued commercialization initiatives, CLC has formed relationships with multiple new accounts who have placed wholesale orders for products to include distillates, winterized oil, and kief.

As of June 2021, CLC has been able to consistently produce distillate oil (pictured above) with a THC concentration of 90.4%. The distinct transparency of the liquid is indicative of its purity, and is a key element of its appeal for licensed producers and legal-aged cannabis users alike.

Milan Stefancik, Director of Sales and Marketing for CLC commented, “The leading-edge science behind how our cannabis strains are developed and then grown, harvested, and extracted is a significant point of pride for us here at Christina Lake Cannabis. Through creative approaches to product and process development, we have been able to gain qualitative and quantitative competitive advantages in the Canadian cannabis industry, and it is exciting to be bringing the results of this innovation to the marketplace. I believe that reaching a consistent 90.4% THC concentration makes our supply of distillates even more marketable, which has

been evidenced by positive feedback from licensed producer clients as well as their end-user clientele.”

About Christina Lake Cannabis Corp.

Christina Lake Cannabis Corp. is a licensed producer of cannabis under the *Cannabis Act*. It has secured a standard cultivation licence and corresponding processing/sales amendment from Health Canada (March 2020 and August 2020, respectively) as well as a research and development licence (early 2020). CLC’s facility consists of a 32-acre property, which includes over 950,000 square feet of outdoor grow space, offices, propagation and drying rooms, research facilities, and a facility dedicated to processing and extraction. CLC also owns a 99-acre plot of land adjoining its principal 32-acre site, which enables the Company to grow at a much larger scale. CLC cultivates cannabis using strains specifically developed for outdoor cultivation and in its inaugural harvest year produced 32,500 kg (71,650 lb) on its existing facility before developing an adjacent 99-acre expansion property. Such an expansion will ultimately bring CLC’s annual cultivation footprint to over 4.35 million square feet, which could enable at least 150,000 kg (330,693 lb) of low-cost, high-quality, sun-grown cannabis to be produced annually by the Company.
